General

About us

The new Bock training centre in Frickenhausen.

In this catalogue you will find our whole vehicle compressor programme.

Bock vehicle compressors in the FK series are the result of decades of experience in mobile refrigeration. Particularly when it comes to bus air conditioning, they are the standard of all renowned manufacturers. But they have also become firmly established in transport refrigeration and train applications together with other areas of mobile and stationary refrigeration.

For any queries you may have:
Contact us directly or contact one of our agencies! Our team will be happy to take your call.

Bock Frickenhausen Tel.: +49 7022 9454-0

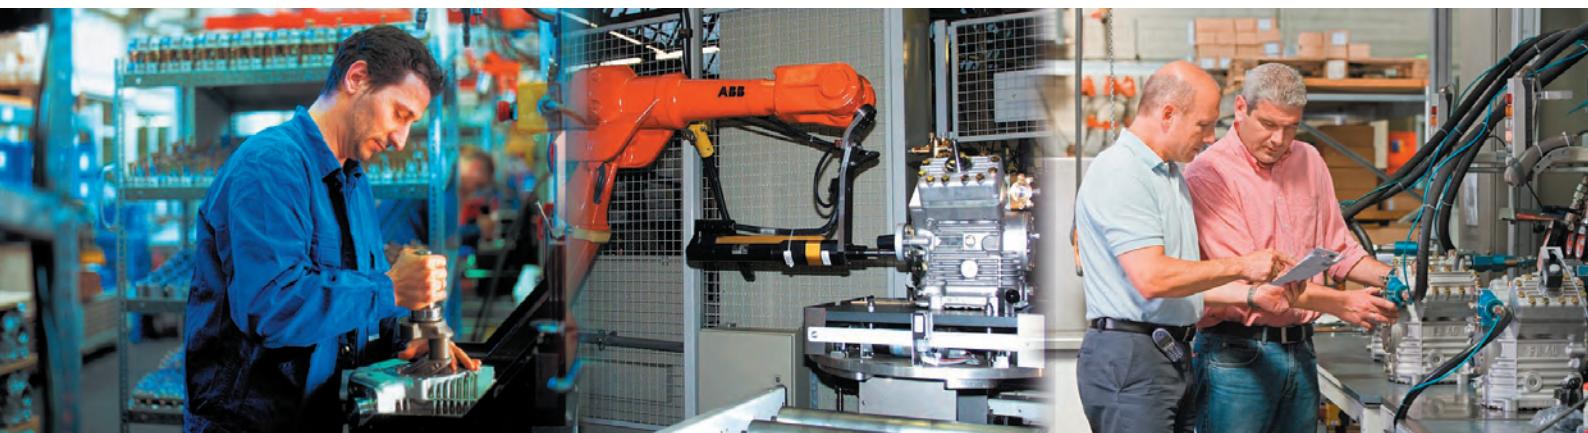

The Bock product programme, our worldwide distribution network and much more can be found round the clock on www.bock.de

Innovation and Tradition

For 75 years, Bock has represented quality, innovation and reliability in the refrigeration and air conditioning industry.

Over a period of decades, we have developed as a company specializing in piston compressors in response to the different requirements for commercial, industrial, railway, bus and transport refrigeration. Our compressors are manufactured on the latest generation of production and assembly installations.

Bock, with subsidiaries and agencies in more than 60 countries, offers a comprehensive service ranging from consultancy through to the rapid supply of compressors and spare parts.

The production programme

Semi-hermetic compressors HG(HA)

The Bock HG (Hermetic Gas-cooled) range of semi-hermetic compressors offers traditional suction gas-cooled compressor state of the art technology. These compressors of the highest quality standard excel in their running comfort, easy maintenance, high performance and reliability.

Suitable as standard for conventional or chlorine-free HFC refrigerants.

The HA (Hermetic Air-cooled) range, specially engineered by Bock, exists for deep-freezing applications, in particular for use with refrigerants R22 and R404A.

Available versions:

Single-stage HG (HA) compressors, two-stage HGZ compressors, 8/4 pole HG compressors, DHG (DHA) Duplex compressors, compressor units with receiver and SHG (SHA) condenser units, air-cooled.

Open type motor compressor AM

With the AM range, we offer an extremely compact compressor with an open construction. Its special features are its robust design, easy handling and the resulting wide range of applications. In addition, the compressor is separate from the motor, which is a particular advantage in the event of a motor burn-out.

Available versions:

AM single-stage compressors, AM 8/4 pole compressors, compressors for NH₃, DAM Duplex compressors, compressor units with receivers and SAM condenser units, air-cooled.

Open type compressor F

The F model series provides modern open type compressors for separate drive systems (using V belts or direct couplings). Load transfer through a V pair. Virtually all drive capacity requirements can be met.

Very compact compressor design, robust and easy to handle. Oil pump lubrication as standard.

Available versions:

Single-stage F compressors, two-stage FZ compressors, compressors for NH₃, FDK compressor units.

Vehicle compressors FK

Bock vehicle compressors of the FK range are the result of many years of experience in the domain of mobile cooling systems. Especially for bus and coach air-conditioning systems, they are among the standard units used by all the well-known manufacturers, while also being well established in the domain of transport refrigeration systems and in other mobile and stationary refrigeration systems.

The unsurpassed light, compact, robust design and wide r.p.m. range are only some of the outstanding features of this unique product range of two, four and six cylinder compressors.

A wide variety of designs can be tailored to suit individual requirements.

The so-called K version is a special innovation with a unique valve plate system for maximum performance in bus and coach air-conditioning systems.

Available versions:

FK for bus and railway air-conditioning

FK for transport refrigeration and other applications

The Bock FK family

At a glance

The bock vehicle compressor: The reliable core of every bus air conditioning system

Compact, light, powerful and reliable.

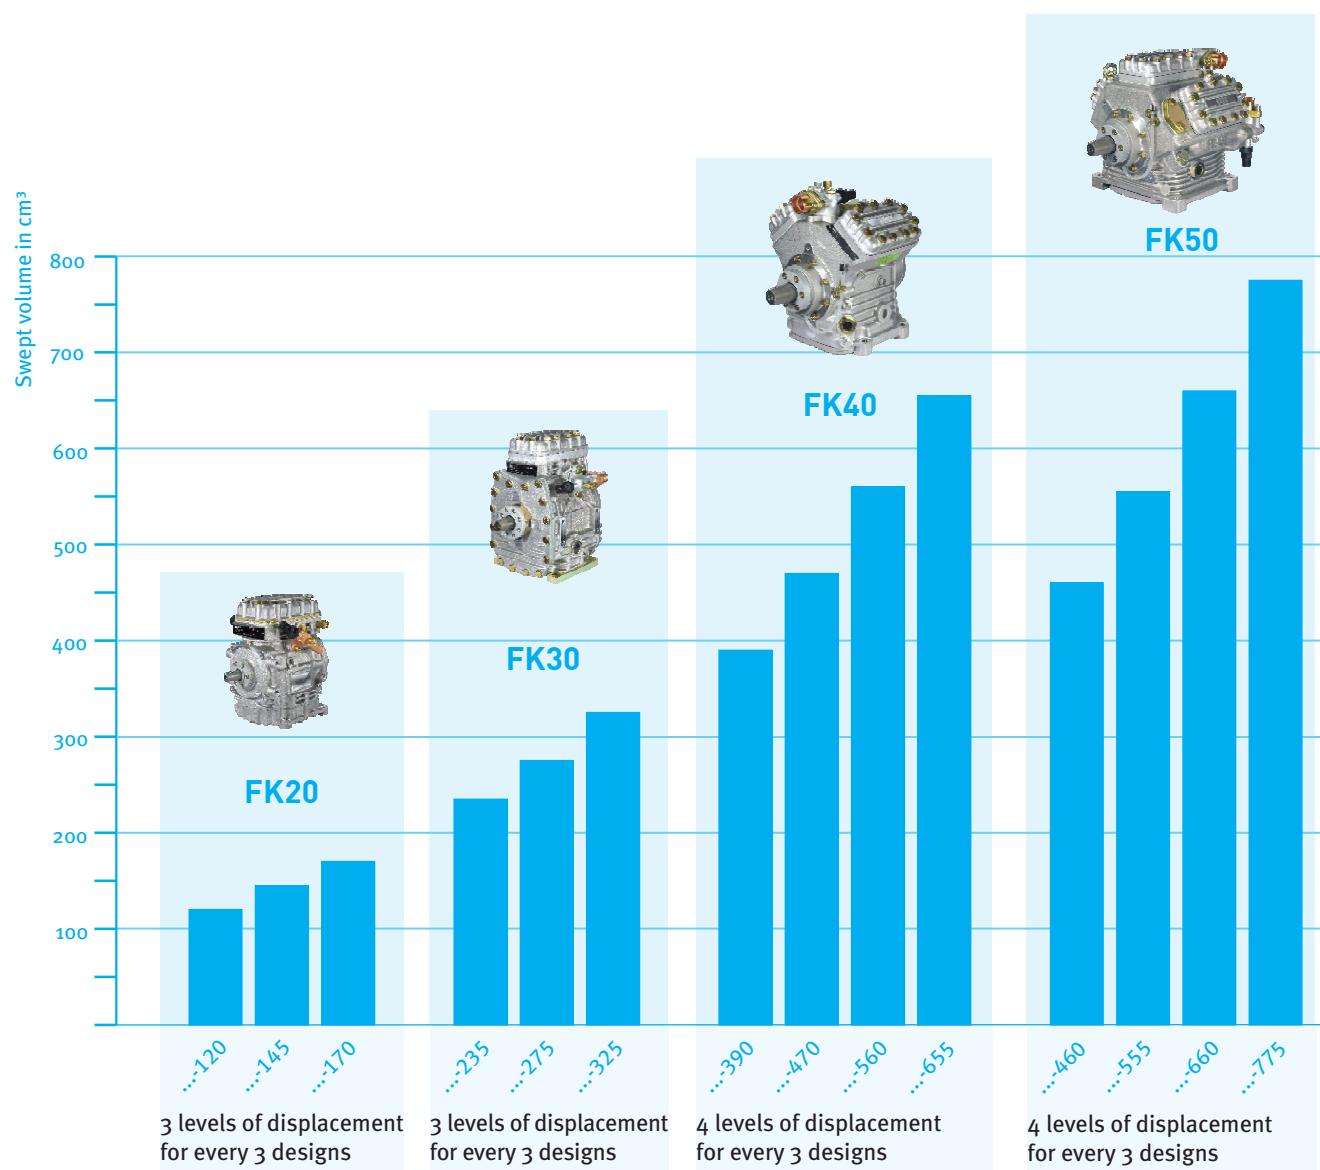

This is how in the 60s, the success story of Bock's FK series vehicle compressors began. It is a story which has not been outdone when it comes to innovation and technology at the highest level of quality available.

Whether in bus or railway air conditioning systems, transportation cooling, or in other mobile cooling applications, Bock FK compressors are the worldwide specialists.

We offer you a unique range of compressors in four basic models in two, four and six cylinder designs with a total of 14 displacement levels and depending on the application range, different design variants. In addition, we have numerous ways of adapting the compressor to your individual requirements.

Come and talk to us, our competent team will be pleased to advise you.

The complete programme. ...4 construction sizes and 14 levels of displacement

The particular features

2-, 4- and 6-cylinder compressor in an light aluminium construction

with excellent characteristics:

- › The lightest and most compact there is
 - › Highly robust design
 - › Wide speed range
 - › Efficient operating performance
 - › Universal application

The right solution for every application

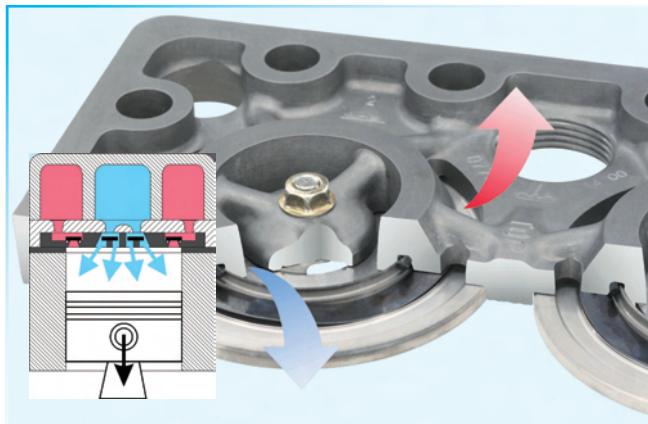

Three design variations are available for different areas of application

- › For air conditioning the K Design
 - › For air conditioning or normal cooling the N Design
 - › for deep freezing the TK Design

The differences are mostly associated with the valve plate version which is adapted to each application range where operational safety and efficiency are concerned.

- The K Design

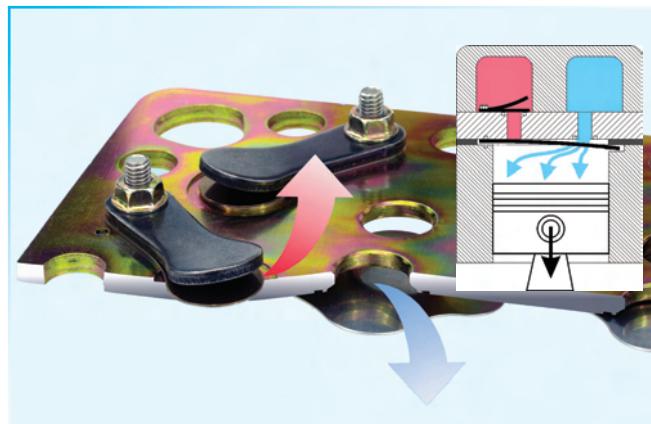

A special Bock innovation. The unique valve plate system for those with high standards - specially developed for bus air-conditioning systems. Extremely robust and reliable, not only where there are constant variations in speed and in pressure, but also where there are liquids. The base plate of this system is made, as is the compressor of aluminium. The valves are constructed as ringfin packages and are guided loosely. This means that they are neither exposed to lateral nor torsional powers and thanks to their special construction they cannot fall into the cylinder area nor hit the top of the piston. **The no compromise solution for mobile air conditioning.**

- The N Design

The cost-effective alternative to the K Design.

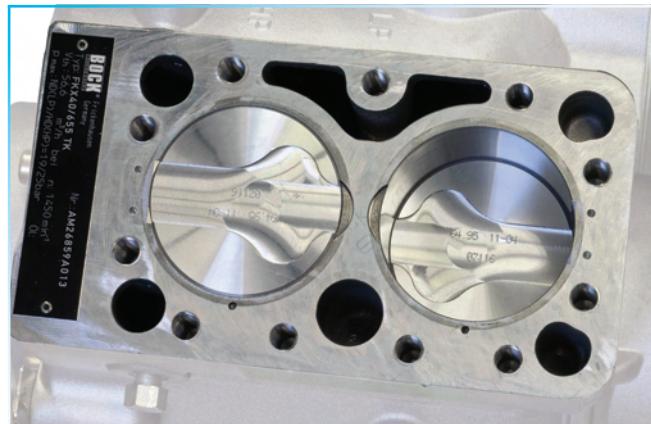

The universal valve plate system. Suitable for both air conditioning in buses and for other applications. The base plate is designed in steel. The valve units are constructed as one-sided fixed tongue fins which makes them form a simple and cost-effective construction. In comparison to the K design, the valves are exposed to lateral and torsional powers, which mean that the load carrying ability reduces, in particular in air conditioning where there are fluctuating speed or liquid influence.

- The TK Design

A special variant for deep freezing.

Building on the N valve plate basic concept with additional measures to optimise the charging efficiency at low evaporation temperatures. The piston top have suction fin contour grooves which further reduce the dead space and lead to increased performance in the deep-freeze area.

The Bock FK family

The particular features

Additional features

Quiet with low vibrations

- › Four cylinder construction from 390 cm³, Six cylinder from 460 cm³
- › Minimum oscillating mass, connecting rods and pistons made out of aluminium
- › Dynamic mass balance of the whole mechanism
- › High volume pressure area to dampen pulsations

Low-wearing long-lived mechanism

- › Solid construction and design
- › Classic crankshaft construction with hardened surfaces
- › Double-sided roller bearing mounting design for maximum radial forces
- › Aluminium pistons with two-ring assembly
- › Aluminium connection rod in divided, screwed design

2 cylinder

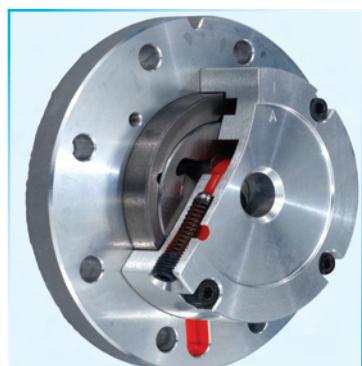

4-cylinder

6-cylinder

Reliable and safe oil supply

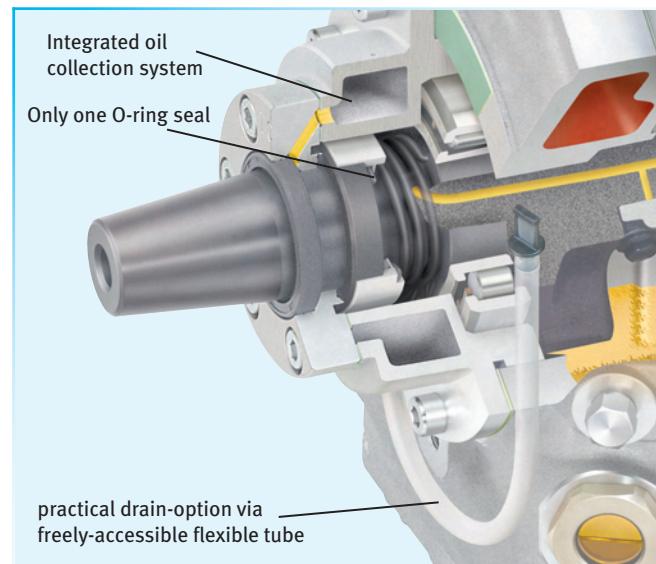

- › Self-contained lubrication through an internal rotor pump
High performance, independent of rotating direction, compact
- › Oil overpressure valve to regulate the oil pressure
- › High volume oil sump
- › Two sight glasses for checking the oil level (FK40/50),
(FK30 one sight glass)

Simply constructed shaft seal

- › Tried and tested construction for decades
- › Only one O-ring seal, counter ring designed as the screw-on cover
- › With oil washing for cooling and lubricating the whole unit
- › So easy to change the shaft seal for maintenance purposes

For example: FK40 shaft seal construction

Integrated oil collection system with a large storage volume

- › FK40/FK50:
practical drain options through a freely accessible flexible tube. No dismantling of the coupling necessary
- › FK30:
Oil collection with oil felt insert for changes

FK30

FK40/FK50

The particular features

Valve plate construction for safe operation

(see also page 6)

- › Operational valves made out of high quality, impact-resistant spring steel
- › K Design with loosely guided ring valve units
- › N and TK design with one-sided clamped tongue valve units
- › Highest operational safety and efficiency in all application areas

Variable connection and fixing options

- › Variable position of the suction shut-off valve (FK30/40/50)
- › Rotate options for the suction and discharge shut-off valve
- › Fixing options for supplementary attachments.
- › More variants for fixing the compressor.
- › Customer-made designs on request.

Special designs, for example:

Suction shut-off valve mounted on cylinder bank with intermediate adapter.

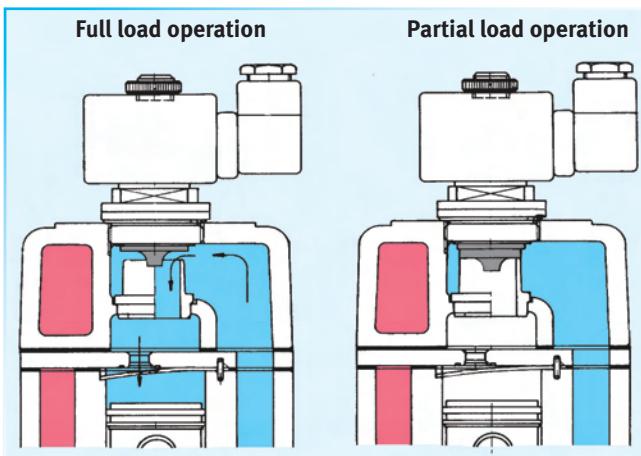

Special designs, for example:

Suction shut-off valve mounted between the cylinder covers.

Capacity regulator (Option)

- › Locking of suction port of a cylinder bank with a electromagnetic pilot valve.
- › Possible capacity steps:
 - Four cylinder compressor: 50 %
 - Six cylinder compressor: 66 % / 33 %

Various drive options

- › Conical shaft end for safe power transfer and exact installation of the drive elements.
- › V-belt drive with electromagnet coupling or flywheel.
- › Additional drive types on request.

**Compressors for bus and
railway air conditioning**

At a glance

Bock vehicle compressors in the FK series are the result of decades of experience in mobile refrigeration. Particularly when it comes to bus air conditioning, they are the standard of all renowned manufacturers.

Unsurpassed lightweight, compact and robust design with a large speed range - these are just a few of the outstanding features of this unique product range with 2, 4 and 6 cylinder compressors. Customer-made to the individual application with many different design versions.

One special innovation constitutes the so-called K version with a unique valve plate system for the toughest demands in mobile air conditioning.

All compressors
at a glance

Models available

Type	Levels of displacement [cm³]	Possible Design variants
FK20	120, 145, 170	K and N
FK30	235, 275, 325	K and N
FK40	390, 470, 560, 655	K and N
FK50	460, 555, 660, 775	K and N

K specially for air conditioning,
N for air conditioning or normal cooling
For a detailed description see also page 6

In addition for electrical operation, (i.e. railway air conditioning) we have an interesting selection of compressors from our semi-hermetic programme.

For other requirements, please ask us.

Type key

FK X 40 / 655 K

¹⁾ X = Ester oil filling (HFC refrigerant,
e.g. R134a, R407C)

²⁾ K = specially for air conditioning
N = for air conditioning or normal cooling

Technical data, dimensions and connections, scope of supply and accessories

can be found from page 27 onwards

FK Series K and N

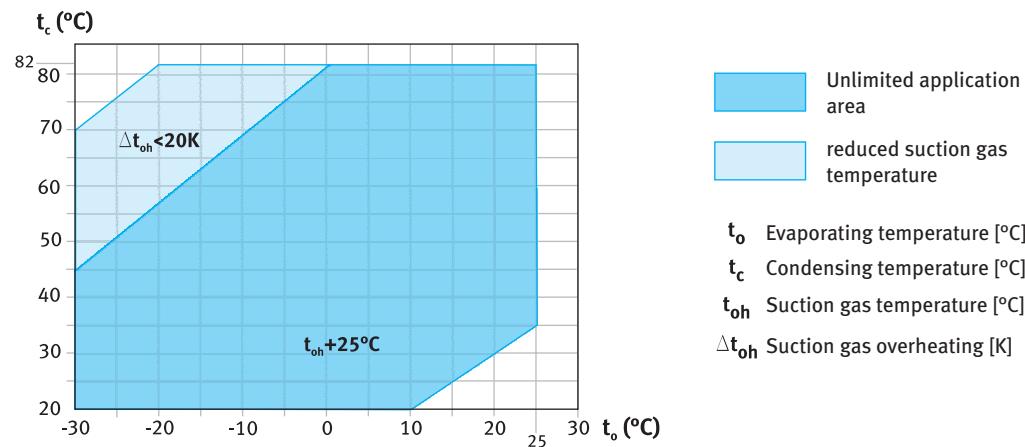

Bus and railway air conditioning

Performance data

R134a

Limits of application

FKX20, FNX30, FNX40, FNX50

Note:

Limits of application

Compressor operation is possible within the examples in the diagram showing the limitations of use. The meaning of the surfaces marked in colour are to be observed. Limiting areas should not be selected for layout or continuous operating points.

Performance data

Performance specifications for the R134a are based on **25°C suction gas temperatures without liquid subcooling**.

Compressor speed 1450 rpm.

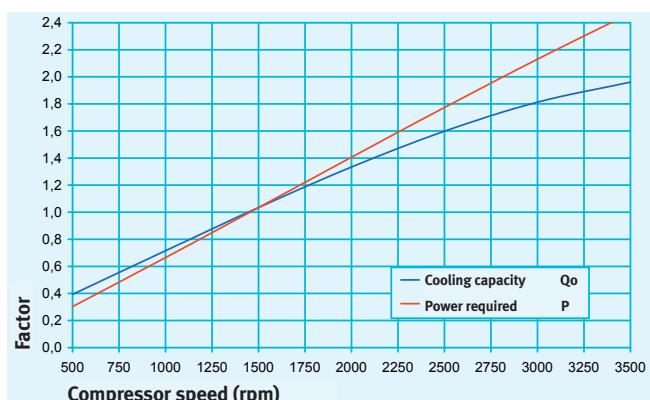

The values can be stated to judge the overall performance at other speed with the help of the calculation factors below.

For additional technical data for other operating points see Bock software.

Speed range:

N Design	500 - 3000 rpm (max speed 3500 rpm)
K Design	500 - 3500 rpm

Maximum permissible operating pressure (HP): 28 bar

Performance data at 1450 rpm

Based on 25°C suction gas temperature
without liquid subcooling

reduced suction gas temperature

FK Series K and N

Bus and railway air conditioning

Performance data

R407C

Limits of application

FKX20, FNX30, FNX40, FNX50

Unlimited application area

reduced suction gas temperature

t_o Evaporating temperature [°C]

t_c Condensing temperature [°C]

t_{oh} Suction gas temperature [°C]

Δt_{oh} Suction gas overheating [K]

Note:

Limits of application

Compressor operation is possible within the examples in the diagram showing the limitations of use. The meaning of the surfaces marked in colour are to be observed. Limiting areas should not be selected for layout or continuous operating points.

Speed range:

N Design 500 - 2600 rpm

K Design 500 - 3500 rpm

Maximum permissible operating pressure (HP): 28 bar

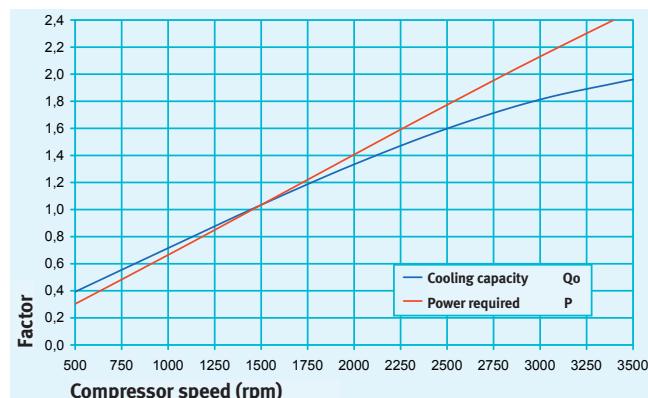

Performance data

Performance specifications for the R407C are based on **25°C suction gas temperature without liquid subcooling**.

Compressor speed 1450 rpm.

The values can be stated to judge the overall performance at other speed with the help of the calculation factors below.

For additional technical data for other operating points see Bock software.

Compressors for
transport cooling

At a glance

Bock vehicle compressors of the FK range are the result of many years of experience in the domain of mobile cooling systems.

The unsurpassed light, compact, robust design and wide r.p.m. range are only some of the outstanding features of this unique product range of two, four and six cylinder compressors. A wide variety of designs can be tailored to suit individual requirements.

For low temperature applications, an optimised TK model is available.

Models available

Type	Levels of displacement [cm³]	Design variants
FK20	120, 145, 170	TK
FK30	235, 275, 325	TK
FK40	390, 470, 560, 655	TK
FK50	460, 555, 660, 775	TK

TK specially for deep freezing
For a detailed description see also page 6

In addition for electrical operation, we have an interesting selection of compressors from our semi-hermetic programme.
For other requirements, please ask us.

Type key

FK X 40 / 655 TK

¹⁾ X = Ester oil filling (HFC refrigerant, e.g. R404A, R507)

²⁾ TK = specially for deep freezing

Technical data, dimensions and connections, scope of supply and accessories

can be found from page 27 onwards

FK Series TK

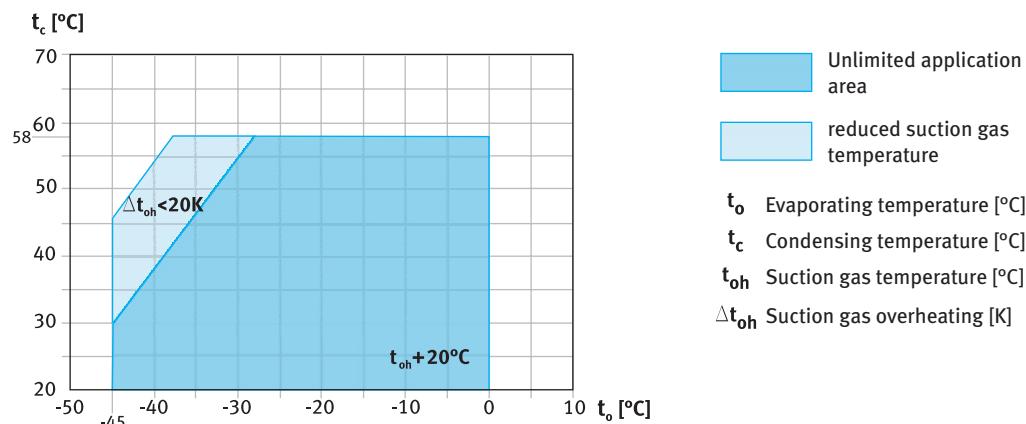

Transport cooling

Performance data

R404A/R507

Limits of application

FKX20, FNX30, FNX40, FNX50

Note:

Limits of application

Compressor operation is possible within the examples in the diagram showing the limitations of use. The meaning of the surfaces marked in colour are to be observed. Limiting areas should not be selected for layout or continuous operating points.

Performance data

Performance specifications for the R404A/R507 are based on **20°C suction gas temperature without liquid subcooling**.

Compressor speed 1450 rpm.

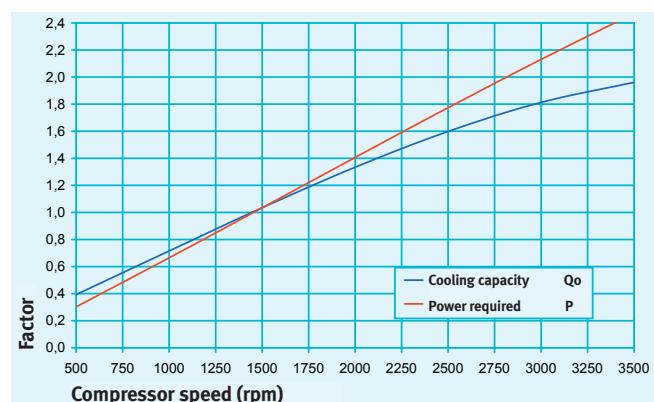

The values can be stated to judge the overall performance at other speed with the help of the calculation factors below.

For additional technical data for other operating points see Bock software.

Speed range:

TK Design 500 - 2600 rpm

Maximum permissible operating pressure (HP): 28 bar

● Option available

1) No connection available as standard.
Available on request (Connection M22 x 1,5)

2) Standard is without sight glass
Available on request (Connection M20 x 1)

3) No connection available as standard.
Available on request (1/8" NPTF, Intermediate flange required)

Scope of delivery

The accessories are the same for the various levels of displacement and the design variants K, N and TK. In the data concerning the type of compressor, these additions are not taken into account.

FK scope of delivery	FK20	FK30	FK40	FK50
Open piston compressor in a light aluminium construction, with suction and discharge valves	●	●	●	●
Two cylinder, cylinder arrangement in row	●	●

Inert gas charge	●	●	●	●

¹⁾ Only the selected design variant is contained in the scope of supply.

²⁾ Only for model FK 30/275 + 325

Data Overview

Accessory

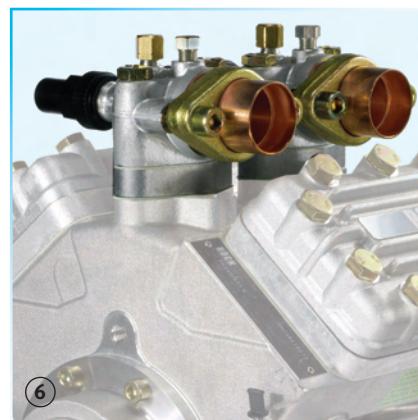

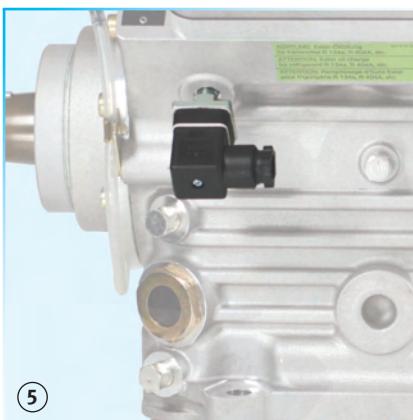

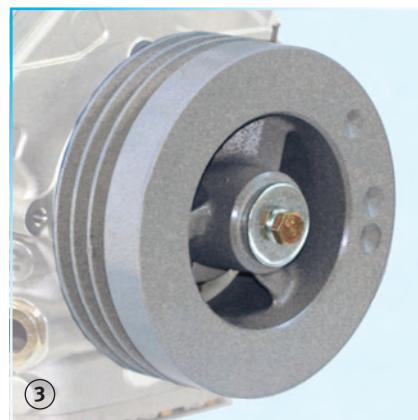

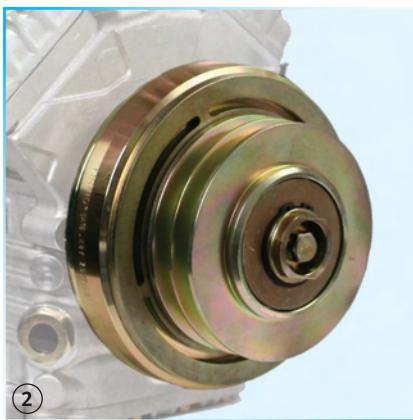

The accessories are the same for the various levels of displacement and the design variants K, N and TK. In the data concerning the type of compressor, these additions are not taken into account.

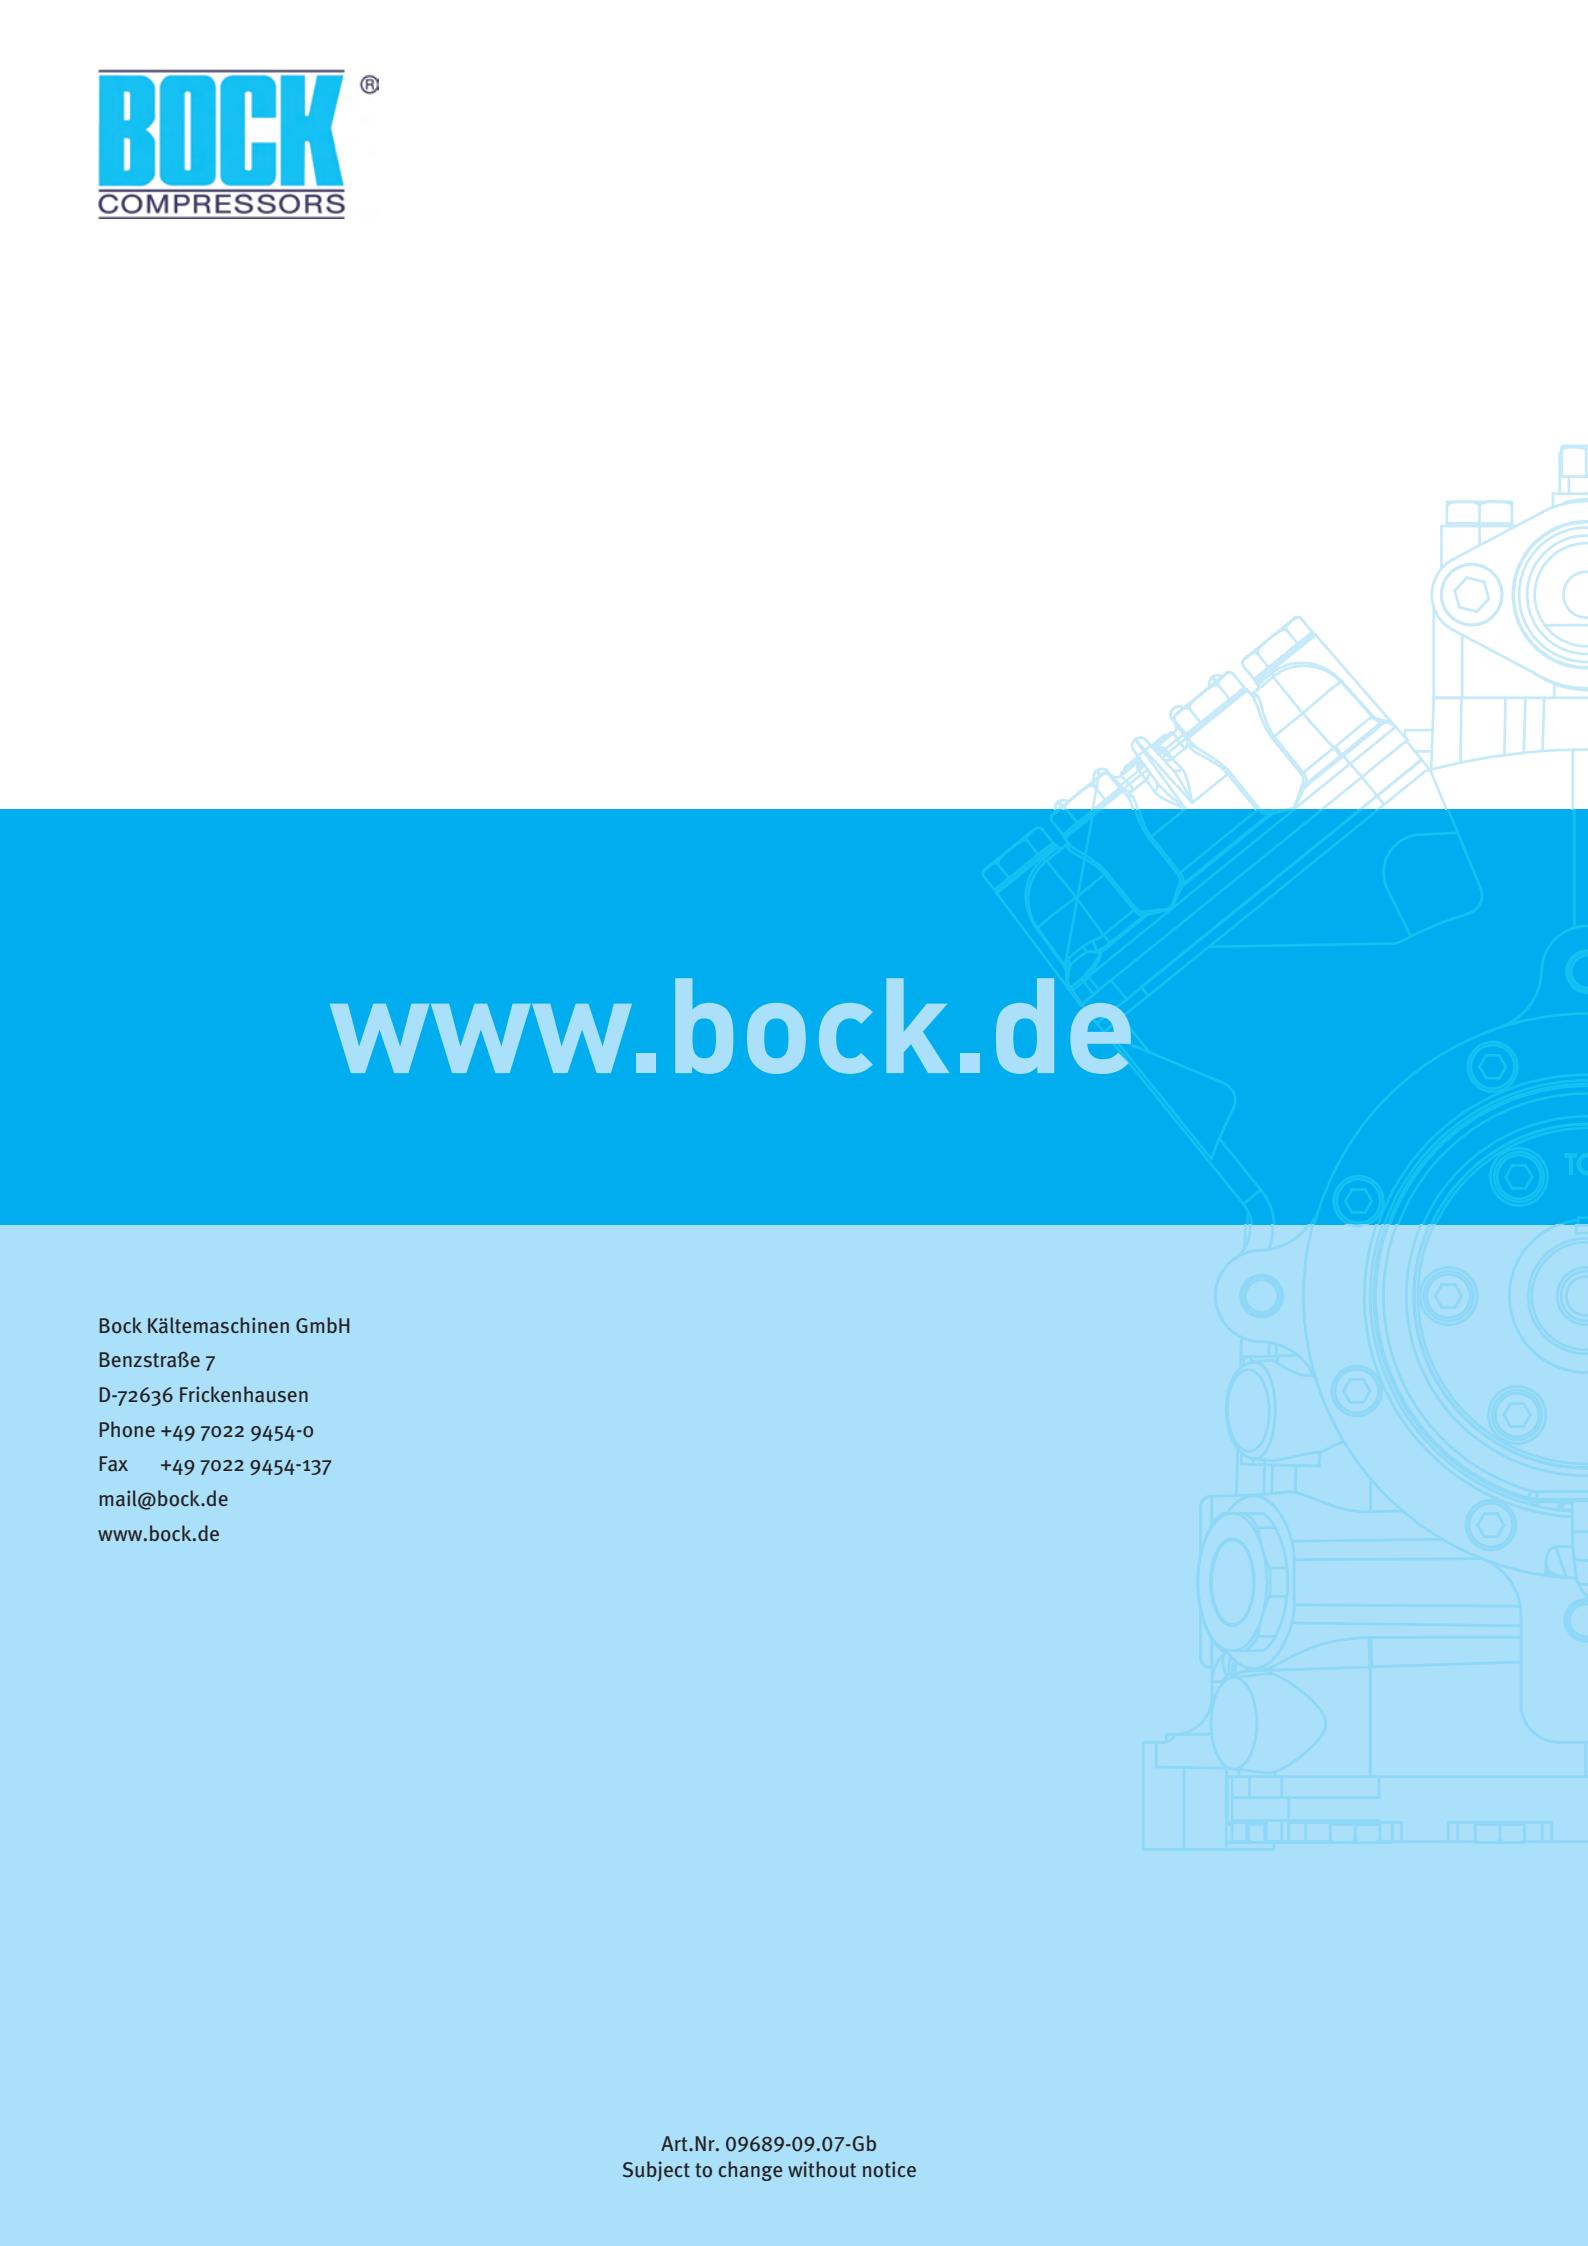

FK Series		FK20	FK30	FK40	FK50
① 24 V DC, 8 W capacity regulator: 1 capacity regulator = 50 % residual capacity	1)			●	
24 V DC, 8 W capacity regulator: 1-2 capacity regulators = 66 / 33 % residual capacity	1)				●
② Electromagnetic clutch 24 V DC LA 21, Ø 147 mm, 2 x SPA, 48 W	1)2)	●			
Electromagnetic clutch 24 V DC LA 30.1, Ø 174 mm, 2 x SPA, 51 W	1)2)		●		
Electromagnetic clutch 24 V DC LA 16.028, Ø 153 mm, 2 x SPB, 60 W	1)2)			●	●
③ Compressor flywheel (three-spoke, grey cast iron) Ø 165 mm, 2 x SPA		●			
Compressor flywheel (three-spoke, grey cast iron) Ø 210 mm, 2 x SPA			●		
Compressor flywheel (three-spoke, grey cast iron) Ø 210 mm, 3 x SPA				●	●
④ Oil sump heater 24 V DC, 40 W	1)	●			
Oil sump heater 24 V DC, 80 W	1)		●	●	●
⑤ Thermal protection thermostat (bimetal tracer)		● ³⁾	●	●	●
Set replacement adapter set for FK40, for same shut-off valve positioning as FK4/467				●	
⑥ Intermediate flange for changing the position of the shut-off valves. Oval flange, height 15, 25, 34, 46, 62 or 75 mm	2)		●	●	●
Sight glass		●			

1) Other voltages on request

2) other designs on request

3) with intermediate flange

A faint, light-blue watermark-like image of a complex mechanical compressor unit occupies the right side of the page. The image shows various components like pipes, valves, and a motor. The text "www.bock.de" is overlaid on this image.
